

SAVE MONEY AND ENERGY WITH LIGHTING REBATES FOR YOUR BUSINESS

The Third Taxing District Electric Department is offering a new Commercial and Industrial Lighting Program to help business customers save both energy and money.

How do you save? By replacing your five-year or older lighting systems with high efficiency fluorescent lights or LED technology. It's time to switch. Convert your old inside and outside lighting now.

We are **more than doubling the normal cash rebate** to 32 cents per kilowatt-hour saved. The total rebate cannot exceed 50 percent of the lighting project's cost undertaken by any business customer.

Besides the real savings generated by investing in new lighting, you actually save twice. Why? T-12 fluorescent lights will no longer be manufactured and available for purchase from wholesalers and retailers in the very near future.

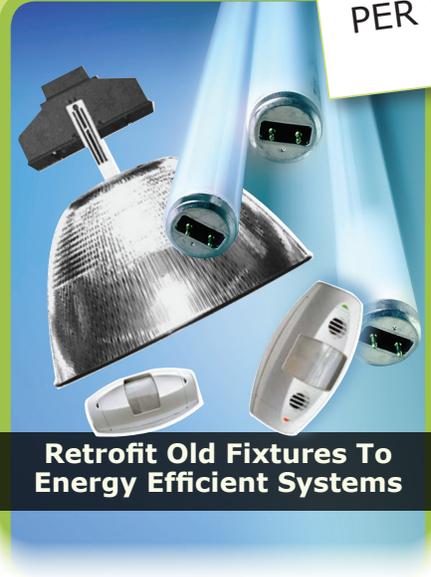

For step-by-step instructions on how to participate in this program, please contact Elida Gray at **(860) 425-3211** or visit **www.ttd.gov** and—we'd be happy to schedule an appointment with you or your representative.

This is a great way to save, SO ACT TODAY!
